

2020 General Election Risk-limiting Audit Discrepancy Report

The attached report represents the discrepancies reported by audit boards during the 2020 General Election. It is generated using the Colorado Risk-limiting Audit Software with an annotation by the Voting Systems team in the Colorado Secretary of State's office. The report contains the following columns:

- `county_name` – The county that audited the ballot on which the discrepancy occurred
- `contest_name` – The contest on the ballot that had the discrepancy
- `imprinted_id` – This is the unique number assigned to each ballot. In the Democracy Suite voting system the `imprinted_id` is a three-part number (X-XXX-XXX). The first part represents the tabulator the ballot was tabulated on. The second part represents the batch number of that tabulator. The third part represents the ballot position within the batch. The Clear Ballot system uses a similar notation, with the addition of a notation for the election added.
- `choice_per_voting_computer` – The choice that was tabulated by the voting system according to the cast vote record
- `audit_board_selection` – The choice that was reported by the audit board
- `Target Contest` – Denotes if it is a target contest for the audit (also represented by red text)
- `Discrepancy` – Denotes if it constitutes a discrepancy
- `Remarks` – The Voting Systems team determination on the most probable reason for the discrepancy.

After the audit has concluded, counties are required to send images of each ballot that had a discrepancy (regardless if it is a targeted contest or not). The Voting Systems team at the Secretary of State's office then compares the images to reports to try to determine the most likely reason for the discrepancy. In the 2020 General Election the following reasons were most likely responsible for all discrepancies:

- `Audit Board Error` – The audit board entered incorrect information which did not accurately represent the voter markings.
- `Pulled wrong ballot` – The audit board retrieved a different ballot than the ballot required by the RLA software, and therefore entered in incorrect choices
- `Voting System Limitation` – A narrow circumstance where the voting system tabulates a vote for a selection the voter corrected because the voter did not choose a different

choice in the contest. (A different selection would result in an overvote and the system would out-stack the ballot for adjudication by election judges.) In this case, the voting system is incapable of discerning true voter intent.

- Ambiguous Voter Intent – The voter marked their ballot in a way that is not easy to interpret. Because of this ambiguity the adjudication judges and audit board disagreed about how the voter’s intent should be interpreted.
- RLA Software Mapping Issue – False Discrepancy – During the audit definition process the RLA Software standardizes contest and choice names to ensure minor syntax differences between counties that share a contest do not result in incorrect data during the audit. In three counties the standardization function did not function correctly on a particular choice in a race, which caused a mismatch in the choice name between the audit board choice and the voting computer choice. This mismatch caused a discrepancy to be reported even though the selections matched in reality. The bug occurred in the Secretary of State’s RLA Software, not in any voting system, and did not affect tabulation in any way since it was in the RLA Software.

The reasons for the discrepancies are an interpretation by the Voting Systems team based on the ballot image as well as some supporting data found in the audit reports. It is not definitive. Likewise, this list of types of discrepancies is not exhaustive, but are the only types that were found by the Voting Systems team in this election.

county_name	contest_name	imprinted_id	choice_per_voting_computer	audit_board_selection	Target Contest	Discrepancy	Remarks
Adams	Justice of the Colorado Supreme Court - Hart	1-122-50		"No"		X	Adjudication Error
