## INTRODUCTION

This report contains data on coal mines and coal analyses of the Denver and Cheyenne Basins available as of June 22, 1978. It is one of three reports resulting from the first year of a two and 1/2 year investigation of the environmental impact of energy resource development in the Denver and Cheyenne Basins, Colorado. Funding for this study was provided by the U.S. Geological Survey's Energy Lands Program through U.S.G.S. Grant No. 14-08-0001-G-487.

Most data in this report is compiled from published and open-file reports. The remaining information was kindly provided by J. W. Hand, Cameron Engineers, W. S. Landers, Public Service Company of Colorado, and J. Frost, Earth Sciences, Inc.

The locations of the 320 known mines which have operated in the Denver and Cheyenne Basins are shown on Plate 1. These mines are listed by the last known name by which it operated. Previously used names are shown in parentheses. Table 1 contains pertinent data on the 320 mines shown on Plate 1 and on other mines whose locations are not accurately known and are not plotted on Plate 1. All names by which a mine has been known are listed alphabetically by county in Table 1. Alternate mine names are listed in the "Description" column. Also listed in Table 1 are data on mine location, producing formation, mining method, current operational status, production years, cumulative production, coal bed name, thickness, and depth. A list of references for each mine is also included. The references are keyed to the Bibliography for Coal Mine Data at the end of Table 1.

In many cases, data on old mines is unclear. A variety of sources were used to compile Table 1, and in some instances, different sources gave contradictory data. Where this happened, the author attempted to select the most reliable data. Because of this problem, users of this report may desire to consult the references for a particular mine of interest.

Table 2 is a list of coal analyses compiled alphabetically by county from a variety of sources. All analyses are keyed to the Bibliography for Coal Analyses to provide the user the original source of the analysis.

The analyses vary as to completeness and method of analysis. This, in part, is due to the number of sources used in data compilation. Some sources list only the heat value, whereas others, such as Boreck and others (1977), include ultimate, proximate, sulfur form, and trace element analyses. The older analyses were made using methods thought to be unreliable by modern analysts. This fact may be responsible for certain discrepancies between analyses.

Two other reports prepared as a part of this study are also available from the Colorado Geological Survey. These are "Coal Resources of the Denver and Cheyenne Basins, Colorado" (C.G.S. Resource Series 5) and "Location of Drill Holes Used for Coal Evaluation in the Denver and Cheyenne Basins, Colorado" (C.G.S. Open-file report 78-8). Resource Series 5 consists of a text and series of plates which discuss and illustrate the distribution, quantity, quality, mineability, and geologic setting of coal and lignite in the Denver and Cheyenne Basins. It also includes a discussion of the mining history of the basin. Open-file report 78-8 is a 1:250,000-scale map which shows the location and ID number of coal-exploration drill holes, water wells, oil and gas drill holes, and geotechnical drill holes used to evaluate coal in the study area. Summarized versions of these drill hole logs are available as a part of Open-file report 78-8.

## ADAMS COUNTY

MINE NAME	LOCATION	FORM <sup>1</sup>	TYPE <sup>2</sup>	DESCRIPTION <sup>3</sup>	SOURCE <sup>4</sup>
Baker	Sec. 1 T1S, R69W	Lar	a.u.	Shaft in Adams Co., but prod. reported in Boulder Co.	16
Blue Ribbon	NN $\frac{1}{4}$ Sec. 6 T1S, R68W	Lar	a.u.	1933; 3'6"; 311 tons (Parkdale).	5,16
Mitchell	Sec. 9 T1S, R68W	Lar	a.u.	1891	16
Parkdale	NN $\frac{1}{4}$ Sec. 6 T1S, R68W	Lar	a.u.	1921-1922; 591 tons; Prod. from 1907-1916 listed in Weld Co.; mine entry is in Adams Co., mine workings in Weld Co. (Blue Ribbon).	5,16,17,19
Rock Creek	unknown	?	a.u.	1934; 5'7"; 421 tons; near Byers.	5
Scranton	Secs. 16, 28, 29 T3S, R65W	Den	a.u.	Prod. from Sec. 28(?) from 1886-1900; 7'; E Lignite Bed; 35,789 tons; 39'6".	5,9,20,28
Superior	unknown	?	?	1884; 4'6".	5
Thomas	Sec. 12 T1S, R61W	Lar	a.u.		10

1. Coal-producing formation: Lar = Laramie Formation; Den = Denver Formation.
2. Type of mine: a.u. = abandoned underground mine; i.u. = inactive underground mine;  
A.u. = active underground mine; a.s. = abandoned surface mine.
3. Description: Known years of production; seam thickness; seam name; production; and seam depth. If a mine was known by another name at the same time, it is listed in brackets. If a mine was operated under a different name during other years, it is listed in parentheses.
4. Each number corresponds to a reference in the coal mine bibliography at the end of the table.

## ARAPAHOE

MINE NAME	LOCATION	FORM.	TYPE	DESCRIPTION	SOURCE
Air Line	unknown	?	a.u.	1932-1933; 470 tons.	5
Bates	NE $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 5 T5S, R63W	Den	a.u.	Small mine operated before and during 1933 by local ranchers; at least 12' lignite; only a few tons produced from 2 drifts and open face.	27, 28
Unknown	SE $\frac{1}{4}$ SE $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 6 T5S, R63W	Den	a.s.	A few hundred tons produced in 1930's.	27, 28
Unknown	NE $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 20 T4S, R65W	Den	a.u.	Small mine in 6' of coal; see unpublished U.S.G.S. map by E.G. Woodruff (1910), assisted by D.E. Winchester.	9, 20, 28
Unknown	C NE $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 35 T5S, R62W	Den	?	Thin lignite; possibly 30" thick.	28
Unknown	NE $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 10 T4S, R63W	Den	a.s.	Small mine in 1' coal; worked by Converse family during the Depression.	this report
Unknown	C SW $\frac{1}{4}$ Sec. 15 T4S, R63W	Den	a.s.	Small mine in 2' of coal; worked by local ranchers.	this report

1. Sample type: CI = corehole, FC = face channel, DC = delivered sample, TI = tipple sample;  
 Formation: DL = Denver Formation lignite, LC = Larimer Formation coal  
 Note: sample type and seam name are omitted if not known.

2. Basis or type of analysis: 1 = "as-received", 2 = "moisture-free", 3 = "mineral- and moisture-free"  
 3. See "Bibliography for coal analyses" at end of table for source listing.

## COAL MINES OF THE DENVER AND CHEYENNE BASINS, COLORADO

by Robert M. Kirkham

1978

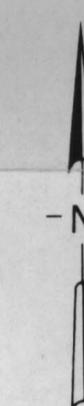

## EXPLANATION

- Abandoned underground coal mine
- Abandoned surface coal mine
- ▨ Inactive underground coal mine
- Active underground coal mine
- Abandoned coal mine, mining method unknown

Reference number for mine, see index below

Outline of coal-bearing rocks in the Denver and Cheyenne Basins, dashed where approximately located

Note: one mine symbol may represent more than one mine; status of mine determined as of June 22, 1978; see Table 1 of text for information sources

## Index of mine names
